

~~SECRET/STD/NF~~

UNITED STATES GOVERNMENT

memorandum

DATE: 18 Jun 90

REPLY TO
ATTN OF: DT-S

SUBJECT: SUN STREAK Report - 9034 (U)

TO: ODCSINT, DAMI-PO

1. (S/STD/NF) During the period of 12 June 1990 through 18 June 1990, six remote viewing sessions were conducted to determine the final location and disposition of a large load of marijuana and cocaine transported on or about 2 June 1990 by the 85-foot coastal freighter identified as [REDACTED] SG1A

2. (S/STD/NF) Remote Viewer 095 perceived the illegal drugs as stored in the stern area of the vessel, behind the superstructure and near the deck level. An object shaped "like a half cylinder" was used as a storage container. On or about 24 June 1990, at dusk, the contraband was off-loaded by hoist/winch; an aircraft was involved to transport the illegal cargo in a northeasterly direction to a transfer point at geographical coordinates, 41° 20' N / 135° 30' W. The final destination was the "Bay area" (San Francisco Bay).

(NOTE: According to 095, the cocaine and the marijuana were collocated.)

SG1A

3. (S/STD/NF) Remote Viewer 079 specified that the destination of the drugs definitely involved a "land drop" occurring in an area identified by geographical coordinates, 36° 15' N / 121° 50' W. The location was described as an offshore [REDACTED] located near an airport. Viewer 079 indicated that on 2 June 1990, the target vessel [REDACTED] was sailing west in rough waters and at a slow rate of speed. The names "Salinas" and "Point Salinas" phonetically surfaced to describe an area associated with the final destination for the drugs. The word "Jewels" phonetically surfaced as well but its meaning was not further described. A smaller fishing vessel on-loaded the drugs from the target vessel and sailed in a southerly direction to an unknown destination.

4. (S/STD/NF) In reply to the tasking to determine the location of the cocaine and the marijuana, Remote Viewer 025 indicated the

drugs were collocated at one of two locations: the San Clemente area found in the vicinity of Camp Pendleton at 33°N / 117°W; and, Half Moon Bay at 37°N / 122°W. According to 025, the "bundles" (of drugs) were transferred to land by hand, stored in "little steel packages", low to the ground. 025 added that "four men were now searching for the drugs."

5. (S/STD/NF) According to Remote Viewer 049, the cocaine is currently stored in a shiny (silver) container placed in a recessed area, a compartment located just above the water line at the bow on the starboard side, and below the anchor-chain room *of the vessel*. The compartment is accessible via a "grated walkway" that leads to a door; as one enters the room the compartment is located to the left in a recessed area. Discarded objects in the form of rags and assorted debris and the stench of malodorous water are below the walkway. The vessel was identifiable by its high bow and mast-like objects located in the center of the vessel. On 18 June 1990, the vessel was located about 1,000 miles west of San Francisco; it was perceived as heading east and northeast towards San Francisco. "At a point southwest of Monterey Bay the vessel changes course and heads southeast, parallelling the (California) coast line. It stops within the vicinity of the 'Separation Zone' between the north/south traffic lanes south of Port Hueneme." At that point the vessel sails northwest towards Santa Barbara. The marijuana is located in the vicinity of "Pigeon Point" and "Point Ano Nuevo" at 37°20'N / 22°40'W. The marijuana is packaged in dark cloth. It is located in a wooden area next to a "scrub clump" and a steep embankment or drop-off. Below the target area is an open and grassy area with a discernible trail leading to the drugs. The ocean is nearby; a populated area is also close to the site. A red hut is in the immediate vicinity *to* the site; more often than not, the hut is vacant. Gears and large wheels are in the area and may be associated with the hut. Sounds and images associated with the activity at the site include "electricity smell, snapping sounds, flat objects nearby, the presence of heat, black triangles, and something holding smaller objects." Someone at the site is studying a map or plan.
